Tress is a web of threads and resin that acts at the same time as the structure, decoration and screen, a never before seen interplay of full and empty spaces, light and shadow. The hanging version is available in three sizes: large, medium, and small. The large hanging version is notable for its more diffuse lighting properties, while the medium and small direct a light beam towards the floor below, and hence can be used individually to highlight a small space or in rows to create perspective effects.
